50/100

RECOMMENDED PLAN: GROWTH

I've surfaced the blocker and the question — I'll wait for your input on those.

To summarize where things stand: I can't proceed with the audit until **(a)** you confirm the target URL (since `testplumbing.com` resembles a placeholder), and **(b)** outbound network access is granted so I can actually fetch the site. Once both are sorted, I'll spawn the specialist subagents (technical, content, schema, performance, local, GEO, SXO) in parallel and produce the full health-scored report.
